

RÉSUMÉ DIGEST

ACT 46 (SB 57)

2019 Regular Session

Walsworth

Prior law provided that the microfilm section of the records management program of the division of archives, records management, and history (division) within the Department of State will be the centralized microfilm center for the state.

New law provides for the removal of the term microfilming to reflect other document preservation systems provided by the imaging and preservation services section of the records management program of the division.

Prior law required all state agencies to obtain division approval for a conversion contract with any other conversion vendor.

New law retains prior law and further requires all state agencies to obtain division approval for the purchase of any conversion system.

Prior law provided that the requirements of prior law will not be applicable to any state agency where it can be demonstrated to be more economically feasible to continue the microfilming within the agency.

New law removes the exemption.

Effective August 1, 2019.
