HB 1042 Original

2022 Regular Session

Hilferty

Abstract: Requires certain agencies within the Dept. of Culture, Recreation and Tourism to evaluate certain drainage projects.

Proposed law requires an agency placed within the Dept. of Culture, Recreation and Tourism with responsibility for parks and recreational facilities to require a licensed civil engineer to conduct certain tasks with respect to any new drainage project located within the jurisdiction of the agency including but not limited to:

- (1) Evaluating the design and maintenance on a quarterly basis including providing a monthly status report on the level of dredging in park lagoons during the months of Jan. through May.
- (2) Providing weekly status reports on the dredging level from June through Nov. and the reports must include a measurement of the depth and water quality of the lagoons and the measurements must be approved by a civil engineer who certifies their accuracy.
- (3) Being present at the local flood protection authority during any named tropical storm or hurricane.

Proposed law requires the agency to hire a licensed horticulturist and civil engineer to maintain drainage equipment, bioswales, etc.

Proposed law provides that the new infrastructure project must be eliminated or revert to a pump system run by a local sewerage and water board if the agency does not meet the requirements of proposed law or funding is not available to meet the requirements.

(Adds R.S. 36:209.1)
