A CONCURRENT RESOLUTION

To urge and request the Louisiana Department of Agriculture and Forestry to study and make recommendations on ways to increase urban forestry in the state.

WHEREAS, the legislature declared in Act 746 of the 1980 Regular Session of the Legislature that:

- (1) Trees serve as a vital resource in the urban environment and as an important psychological link with nature for the urban dweller.
- (2) Trees are a valuable economic asset in our cities. They help maintain or increase property values and attract business and new residents to urban areas.
- (3) Trees play an important role in energy conservation by the modification of temperature extremes, humidity, and winds. This role is particularly important in reducing the amount of energy consumed in heating and cooling buildings and homes, and potentially producing a local fuel and energy source.
- (4) Trees directly reduce air pollution by removing airborne particulates from the atmosphere and helping to purify the air.

1           (5)     Trees also help reduce noise, provide habitat for songbirds and other wildlife,  
2                     reduce surface runoff and protect urban water resources, and enhance the  
3                     aesthetic quality of life in the city.

4           (6)     Growing conditions in urban areas for trees and associated plants have  
5                     worsened so that many Louisiana cities are now losing more trees than are  
6                     replaced; and

7           WHEREAS, under R.S. 3:4382, "urban forestry" is defined as the cultivation and  
8                     management of trees in urban areas for their present and potential contribution to the  
9                     physiological, sociological, and economic well-being of urban society; and

10           WHEREAS, since the inception of Act 746 of the 1980 Regular Session of the  
11                     Legislature, adequate funding for the cultivation and management of trees in urban areas,  
12                     within the state, has been a roadblock in establishing and maintaining a healthy urban  
13                     forestry; and

14           WHEREAS, the USDA Forest Service's Urban and Community Forestry Program  
15                     awards federal grants to fund projects that support urban communities through equitable  
16                     access to trees and the benefits they provide including neighborhoods with less crime, less  
17                     pollution, reduced energy costs, and higher quality of life compared to similar areas with less  
18                     trees and green spaces; and

19           WHEREAS, a 2021 report on the Economics of Urban Forestry in Louisiana  
20                     highlighted how trees have a tremendous impact on local economies and quality-of-life for  
21                     the citizens showcasing that:

22           (1)     Three thousand five hundred sixty-six people are employed as a result of  
23                     urban forestry activities in Louisiana.

24           (2)     Urban trees in the state contribute \$3.9 billion in community-wide  
25                     environmental benefits each year, such as carbon sequestration, air pollution  
26                     removal, and avoided storm-water runoff.

27           (3)     The urban forestry sector in Louisiana has an annual sales and employment  
28                     footprint worth \$411 million; and

29           WHEREAS, in 2023, however, the USDA only awarded the state four federal grants  
30                     in support of urban forestry for local programs to manage and maintain community forests

1 and the urban tree canopy; and

2 WHEREAS, in an effort to maintain economic benefits of urban forestry in their  
3 states, Arkansas, Mississippi, Texas, and others have found funding mechanisms outside of  
4 USDA grants to promote and support urban forestry programs; and

5 WHEREAS, the urban areas in Louisiana are continuing to experience population  
6 growth and expansion, and in order to invest in the state's urban forestry footprint, it is  
7 important to proactively plan, plant, and maintain our community trees and urban tree  
8 canopy.

9 THEREFORE, BE IT RESOLVED that the Legislature of Louisiana does hereby  
10 urge and request the Louisiana Department of Agriculture and Forestry to study and make  
11 recommendations regarding funding mechanisms to increase urban forestry within the state.

12 BE IT FURTHER RESOLVED that the Louisiana Department of Agriculture and  
13 Forestry submit a report of its findings and recommendations to the Senate Committee on  
14 Agriculture, Forestry, Aquaculture, and Rural Development and the House Committee on  
15 Agriculture, Forestry, Aquaculture, and Rural Development not later than February 15, 2025.

16 BE IT FURTHER RESOLVED that a copy of this Resolution be transmitted to the  
17 commissioner of the Louisiana Department of Agriculture and Forestry.
