Provides for the protection, storage, and access of genomic information

<u>Proposed law</u> creates the Louisiana Genomic Security Act; prohibits human genomic research facilities from utilizing genetic sequencers or operational or research software produced in or by foreign adversaries (a state-owned company of, a company domiciled in, or an owned or controlled subsidiary or affiliate of a company domiciled in a foreign adversary); provides that a medical or research facility shall not put into service any new or additional human genetic sequencers or operational and research software used for human genetic analysis produced by a government or state-owned company of a foreign adversary; requires a medical or human genomic research facility, or company storing genetic sequencing data, including through contracts with third-party data storage companies, to ensure the security of human genetic sequencing data by using reasonable encryption methods, restrictions on access, and other cybersecurity best practices; requires annual certification on compliance (in writing, by each impacted medical facility) to the AG by 12/31 of each year; assesses fines of \$10,000 to facilities in violation; provides the AG investigatory authority; removes results from a genetic research or test included in an individual's medical record as the basis on which an insurer, in determining coverage eligibility, establishes premiums, limits coverage, or makes other underwriting decisions; effective upon the governor's signature; has prospective application.

EXPENDITURE EXPLANATION

Attorney General

<u>Proposed law</u> may result in an indeterminable increase in workload in the Office of the Attorney General (AG), to the extent that they experience an increase in the number of instances in which they investigate medical or human genomic research facilities for allegations of violating the <u>proposed law</u>'s prohibitions against putting into service any new or additional human genetic sequencers or operational and research software used for human genetic analysis produced by a government or state-owned company of a foreign adversary. The exact fiscal impact to the AG is indeterminable, because it is unknown the number of instances in which the AG's authority to investigate under the <u>proposed law</u> will be invoked in the future. Any fiscal impact is projected to be absorbed within the AG's budget.

District Courts

<u>Proposed law</u> may result in an indeterminable increase in workload in district courts, to the extent that individuals file suits for damages related to the use of their genomic information by a medical or genomic research facility found to have improperly sequenced their genomic information. The exact fiscal impact relative to the increase in workload is indeterminable, because it is unknown the number of instances in which suits will be filed (and the related hearings conducted) relative to civil suits in violation of the proposed law. Any fiscal impact is projected to be absorbed within Local budgets for district courts.

REVENUE EXPLANATION

<u>Proposed law</u> may result in an indeterminable increase in Self-Generated Revenue in the Office of the Attorney General, for collection of funds associated with investigations of medical or human genomic research facilities in violation of the <u>proposed</u> <u>law</u>. The exact impact to Self-Generated Revenue is indeterminable, as it is unknown the number of instances in which the AG will successfully generate fines from investigations of medical or human genomic research facilities in violation of the <u>proposed</u> <u>proposed</u> <u>law</u>.
